Subject: Request for Public Hearing on Injection wells
Date: Wednesday, January 20, 2021 10:05:16 PM

Dear Mr. Batkah,

It has come to my attention that the EPA is again being asked to permit injection wells in Ottawa County, Michigan to store Class I, so-called "non-hazardous waste" in an area that presents risk to our waters. More and more the state is being asked to fill its underground formations with toxins, with little or no serious investigation of the cost to the environment. We must stop this assault on our state's most precious and valuable resource; our water.

We urge you to conduct a public hearing on these permits to ensure a full understanding of the potential risks of these wells on human health and the health of the ecosystems on which we all depend.

Thank you for your consideration,
***** , Lifetime Osceola County MI resident
